August 2017

Master's Degree, Financial Economics

University of New Orleans, New Orleans, LA

May 2013

Bachelor of Science, Business Economics

Louisiana Tech University, Ruston, LA

May 2008

RESEARCH INTERESTS**Dissertation**

“Financial Crises and Investment Behavior: The Impact of Institutional Investors”

I explore how institutional investor presence and institutional investor types impact investments during the global financial crisis, and how this association affects crisis period performance. Using OLS, industry fixed effects, and Heckman 2SLS regression approaches, I explore two channels through which institutional investors could impact investments: liquidity and monitoring. I find that institutional investors monitor capital and R&D levels to maximize crisis period firm value. In addition, long-term, dedicated institutional investors monitor firm investments more than short-term, transient investors. My findings best support monitoring theory.
